PROFESSIONAL SUMMARY

AI-focused Software Engineer with a Computer Engineering background and experience supporting digitalization and automation initiatives in manufacturing and logistics environments. I build backend and full-stack applications using Python, Django, FastAPI, React, SQL and PostgreSQL, and have contributed to LLM-powered conversational workflows for task orchestration and information retrieval across internal systems. My work combines software engineering, operational process understanding, data workflows and applied NLP.

EXPERIENCE

AI Software Engineer

Jun 2026 - Present

ALTEN · assigned to Airbus, Seville

- Develop AI-enabled applications supporting digitalization and optimization initiatives in manufacturing-related processes.
- Design and implement backend and full-stack solutions using Python, Django, React, SQL and PostgreSQL.
- Integrate LLM-powered capabilities into business workflows to support automation and improve access to operational information.
- Contribute to RAG-based solutions and AI workflows using LangChain and LangGraph to connect language models with enterprise knowledge sources.

Technical Data Analyst · AI & Digitalization

Nov 2025 - Jun 2026

Renault España S.A. · Valladolid

- Supported digitalization of logistics processes across the Alliance Logistics Network and import platforms.
- Developed ETL pipelines and Power BI / Spotfire dashboards tracking 20+ logistics KPIs.
- Built internal applications and automated workflows to digitize incident management and streamline logistics processes.
- Developed LLM-powered conversational agents to support task orchestration and information retrieval across internal systems.

PROJECTS

NOVA AI · Multi-Agent Personal Assistant

In progress

- Personal multi-agent AI platform with a LangGraph supervisor routing requests to file, email, calendar, knowledge and music agents over a shared RAG layer.
- FastAPI, Django, PostgreSQL and Docker microservices for RAG, transcription, summarization and structured-data services, with Spotify/Google integrations and a React + TypeScript frontend.

Spotify DJ · Local AI Music Assistant

Full-stack

- FastAPI, React and TypeScript app with Spotify OAuth 2.0, personalized listening statistics and a local Ollama LLM with LangGraph / LangChain tool calling.
- Streams real-time responses over Server-Sent Events and uses HttpOnly cookies, signed JWT storage, single-use CSRF state and scoped OAuth permissions.

Music Assistant System · NLP & LLM

Bachelor's Thesis · 2025

- Fine-tuned BERT, RoBERTa and T5 models on 10,000+ custom samples, reaching 95%+ intent-classification accuracy on the evaluation set.
- Built a conversational assistant with React, Flask, Node.js and Hugging Face Transformers for intent detection and entity extraction.

TECHNICAL SKILLS

LANGUAGES

Python SQL JavaScript
TypeScript Java C++

WEB & APIS

FastAPI Django React Node.js
REST

AI & ML

LangChain LangGraph AI Agents
RAG Qdrant ChromaDB
Embeddings Transformers
Prompt Engineering Agentic Workflows
Tool Calling Hugging Face PyTorch
NLP Ollama

DATA & BI

PostgreSQL MongoDB MySQL
Oracle ETL Power BI Spotfire

DELIVERY

Git Docker CI/CD Microservices
VS Code Jupyter

EDUCATION

B.Sc. Computer Engineering

University of Huelva · 2021 - 2025
Specialization in AI & Data · GPA 7.4/10

Erasmus Exchange · AI & Data Systems

University of Stavanger, Norway · 2024 - 2025

LANGUAGES

Spanish Native

English C1 · Advanced

ADDITIONAL

- Driving license B · Own vehicle
- Willing to relocate
